Is this market rebound real?

Who is actually leading the October bounce in Indian stocks: large, mid or small companies?

A small data study of 7 NSE indices, 246 trading days, Oct 2025 to Oct 2026

By Akshay Jantwal

Built in Excel from NSE index data

Since the 8 Oct low

Price returns from 8 Oct 2026 (lowest Nifty 50 close) to 16 Oct 2026

+4.1%

Nifty 50

Large caps

+2.2%

Midcap 100

Mid caps

+0.4%

Smallcap 100

Small caps

+15.1%

IT

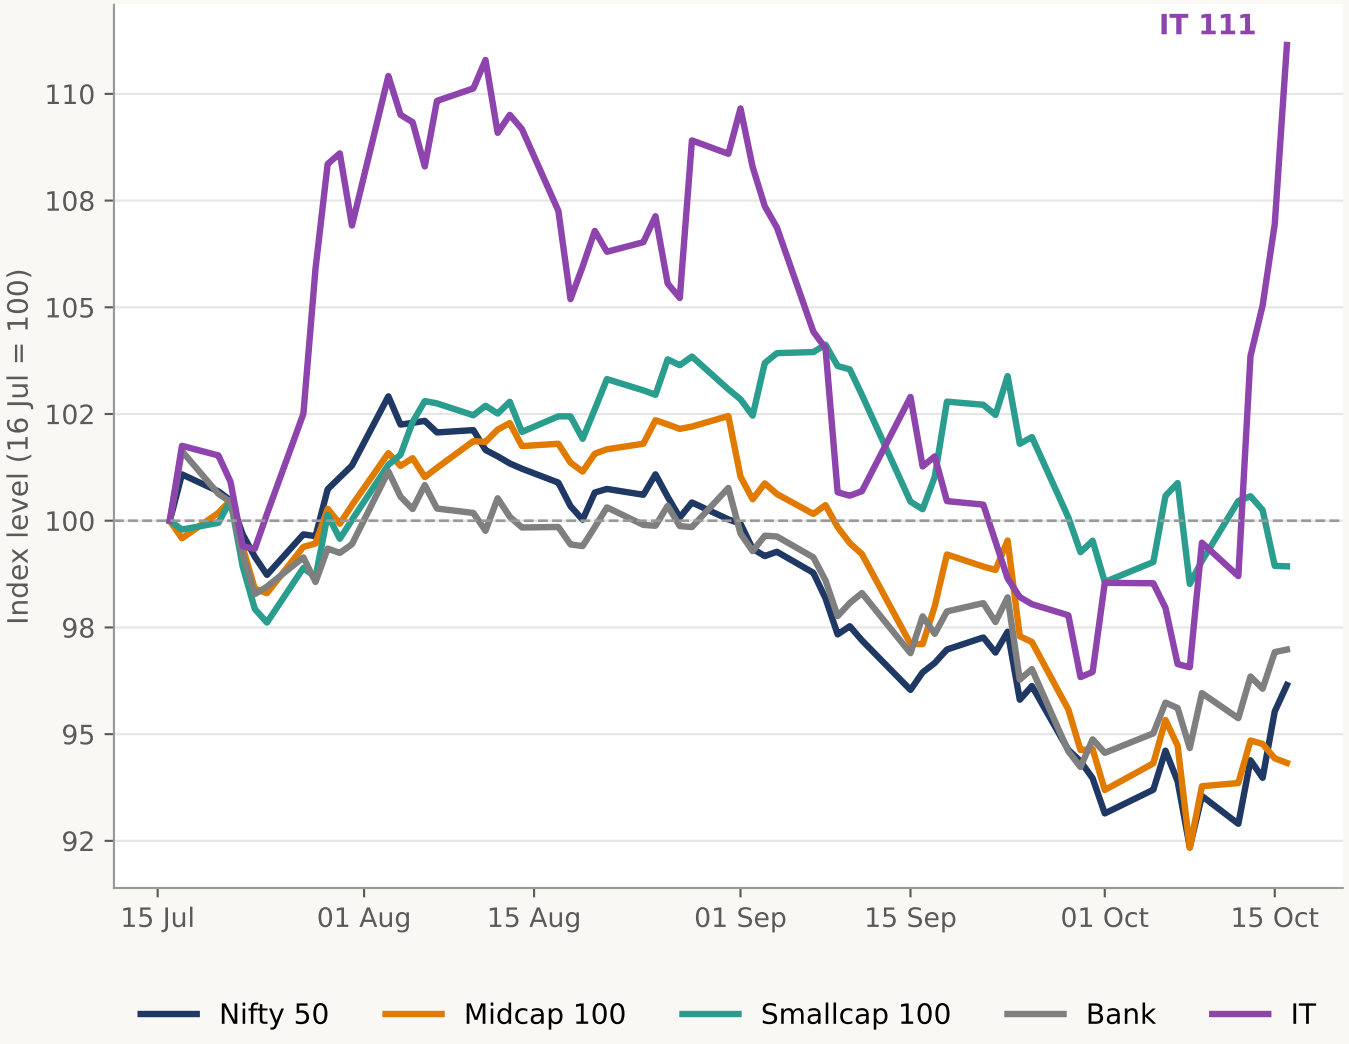

IT sector

The bigger the company, the bigger the bounce: large +4.1%, mid +2.2%, small +0.4%.

Where each index stands vs 16 Jul

Every index rebased to 100 on 16 Jul 2026, so lines are directly comparable

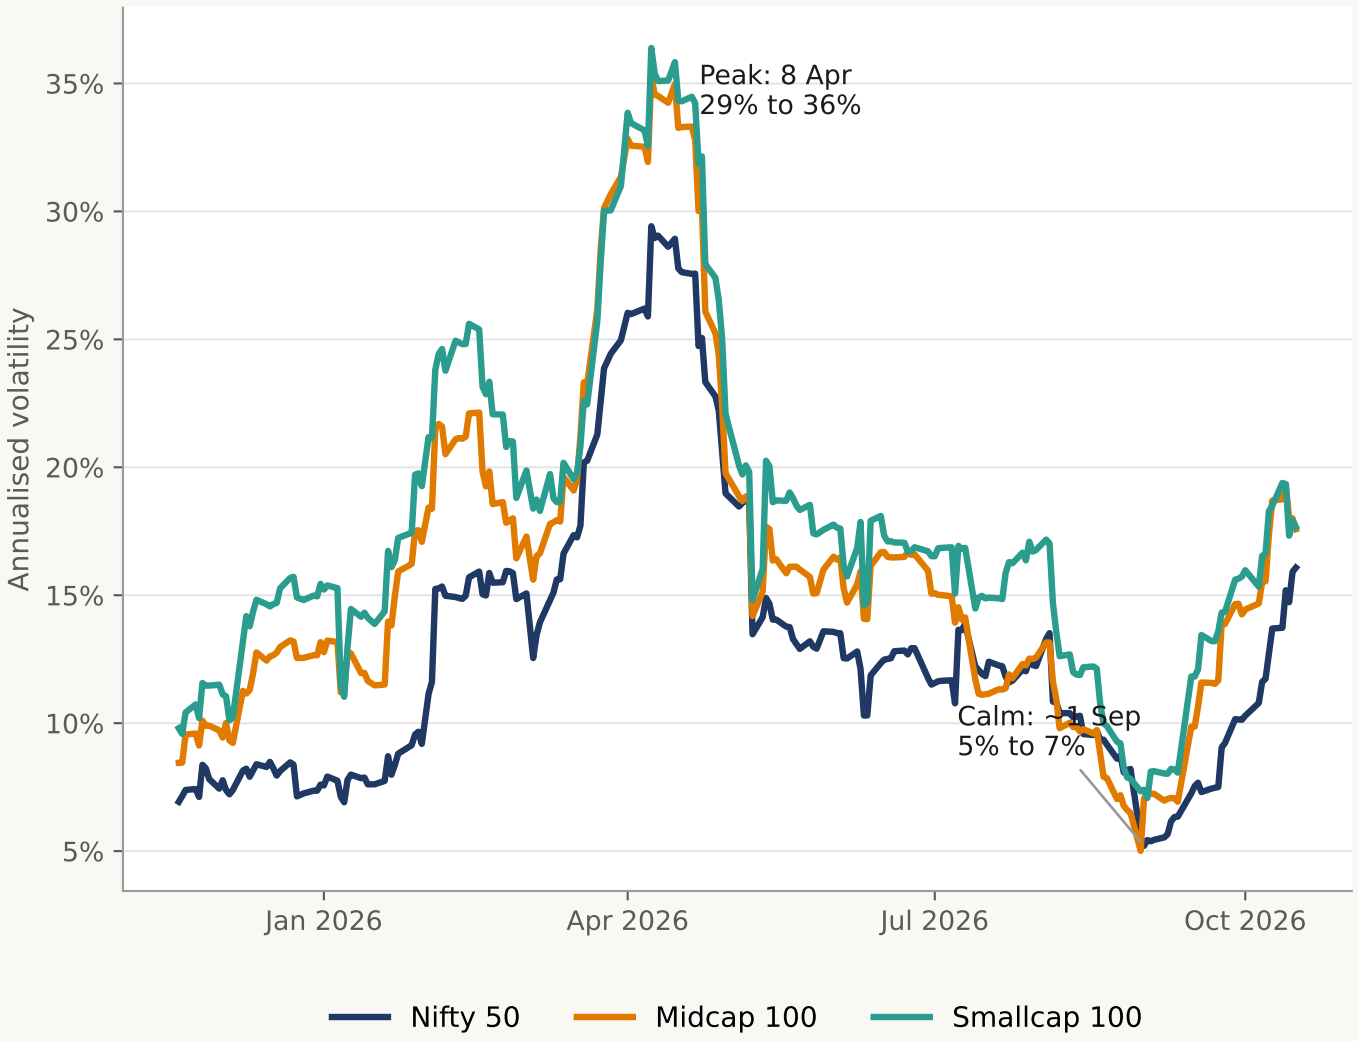

Only Nifty IT ended above its 16 Jul level (111 vs 100).

The Nifty 50 ended at 96, Midcap at 94.

The market is bumpier again

20-day rolling volatility, annualised (how big the daily swings are)

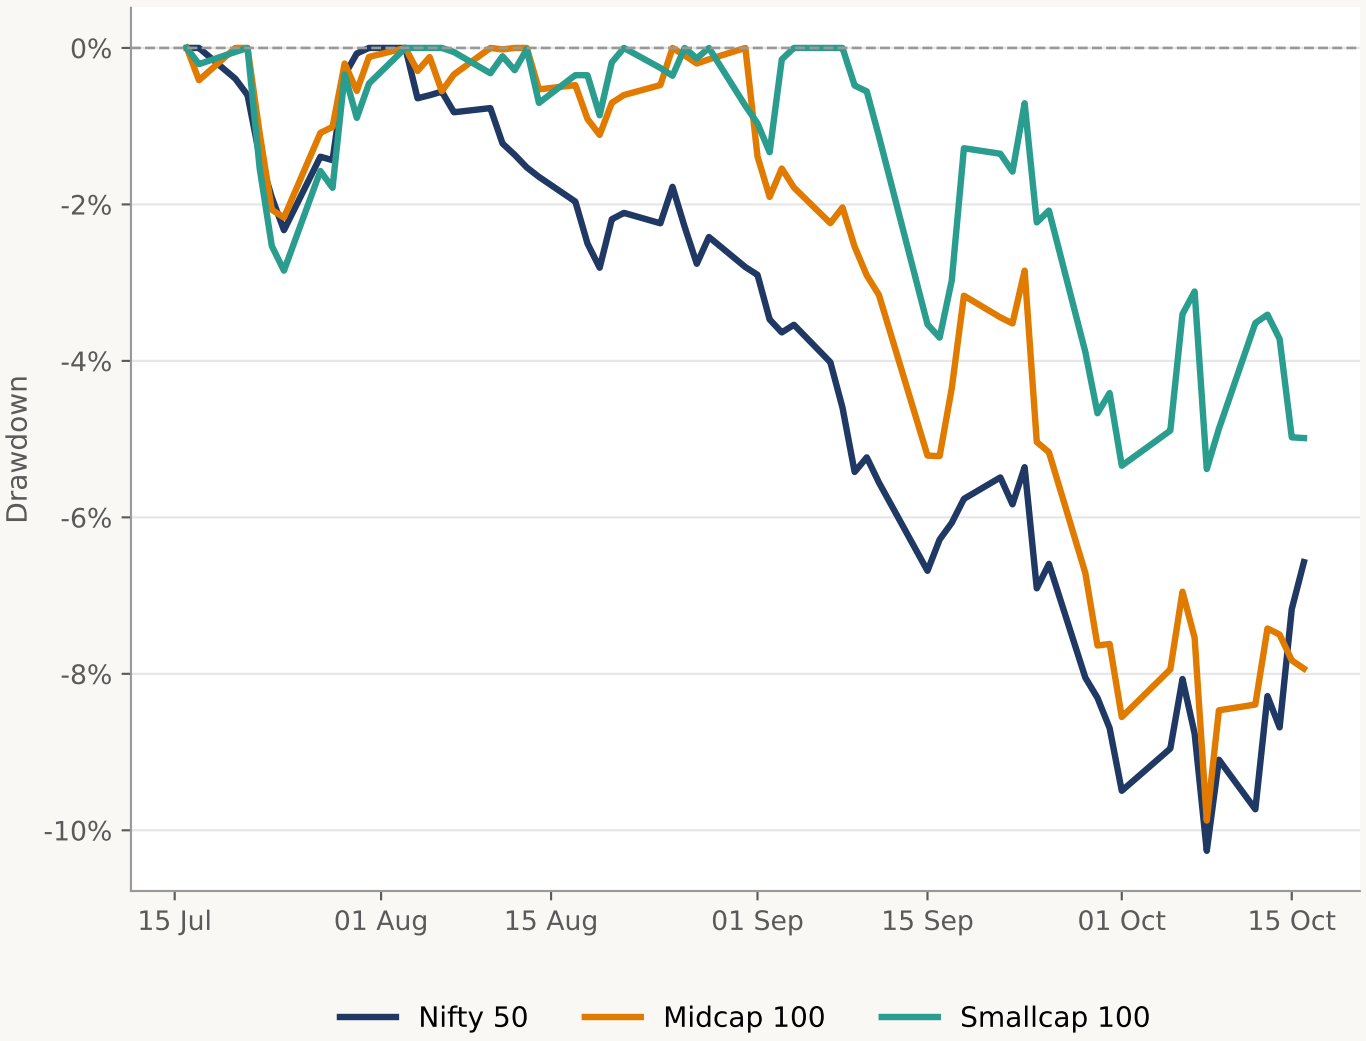

From about 5% in early September back to 16% to 18% now. Still about half of April's peak.

How far below the peak

Drawdown: the fall from the highest level reached since 16 Jul 2026

All three hit their lows on 8 Oct (Nifty 50 −10.3%). Since then Nifty 50 recovered 3.7 points, Midcap 1.9, Smallcap 0.4.

What the data suggests

Narrow rebound

Large caps and IT lead. Nifty 50 led Smallcap 100 by 3.7 points and Midcap 100 by 2.0 points since the 8 Oct low.

But a mixed picture

Over 3 months small caps held up better: Smallcap 100 −0.9% vs Nifty 50 −4.9%.

Handle with care

The rebound is only 6 trading days old, and I had no stock-level data to test breadth directly.

The evidence suggests a narrow rebound. It does not prove one.

How I built it

Everything below was calculated in Excel from NSE index data

Index	Rebound	3 months	Volatility	Max drawdown
Nifty 50	+4.1%	−4.9%	11.5%	−10.3%
Midcap 100	+2.2%	−5.3%	12.7%	−9.9%
Smallcap 100	+0.4%	−0.9%	13.7%	−5.4%
Bank	+2.4%	−4.6%	12.0%	−7.3%
IT	+15.1%	+9.2%	25.7%	−13.1%
FMCG	+1.6%	−8.5%	15.6%	−12.4%
Auto	+5.1%	−4.9%	17.0%	−17.3%

Volatility and drawdown: 16 Jul to 16 Oct 2026.

- Data: daily closing prices, 7 NSE indices, 246 trading days
- Excel tools: SUMIFS, INDEX/MATCH, STDEV, running MAX
- Measures: returns, rebasing to 100, 20-day volatility, drawdown
- Rebound start: lowest Nifty 50 close, 8 Oct 2026

Do you think this rebound can broaden out? Tell me in the comments.
